DIRECTIONS FOR USE

Greenstim may be used on, but is not limited to, the following crops: apple, cherry, cotton, eggplant, melons, olive, pear, capsicum, tomato and lettuce.

Adjuvant: Use of a horticultural wetting agent is recommended for optimal penetration of glycine betaine into the plant. Add the wetter to the spray solution according to the manufacturer's instructions.

Application timing: Apply at flowering stage or prior to anticipated periods of plant stress. The product should be sprayed onto the canopy in conditions of high relative air humidity late in the evening or early in the morning.

Application method: Use normal agricultural spray equipment for foliar sprays to ensure adequate canopy coverage.

PRECAUTIONS

Keep away from heat. Keep away from sources of ignition.
